

SCREEN PACKING RESOURCE GUIDE

This is only one type of packing method – whatever method you use, make sure the screens are packed well.

1

Wash your hands and clean your prep area with an alcohol swab.

2

Remove screens from packet. Stack screens together and fold in one side of the stack of screens.

3

Use your thumb to fold in the other side so that your stack of screens has a cone shape.

4

Roll screens into the middle with the folded sides facing inward.

5

Press together tightly.

6

Insert screens into the stem. Place the stem on your prep work space and push the screens down with a wooden stick so they are tightly packed.

7

Push the screens about 1 cm into the stem to allow room for the drug.
