

We asked some Core Programs to share ways they are using and distributing BZK Wipes ...

COVID-19 Support

Available as individual supplies handed out at harm reduction programs, mobile units and outreach to support hand washing for Coronavirus, colds and flu.

Wound Care Kits

BZK wipes are included in wound care kits to wash hands. BZK wipes are recommended for first aid kits to clean wounds.

Hygiene Kits

Due to the larger size of the BZK towelette, it is helpful for anyone who does not have immediate access to soap and water for hands and body.

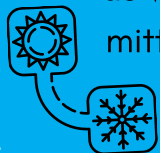

Syringe Recovery Kits

BZK wipes are added to 'pick-up kits' for individuals who will be doing syringe recovery, giving them the ability to wash their hands wherever they are.

Care Kits

BZK wipes are added to care kits that may include items such as water, granola bars, hats, mitts, or hot weather items.

Harm Reduction Supply Kits

BZK wipes are added to harm reduction kits to support hand washing and cleaning of prep surface before handling harm reduction supplies.

Are there other ways your program is using and distributing BZK Wipes? Let us know! info@ohrdp.ca
